

Confined Space Entry

**Are you sure you know how to work safely:
When things get tight!**

A confined space can change practically everything.

Ventilation, sound, heat, protective equipment, permits, a rescue plan. These things might never cross your mind when working out in the open. But you'll need to be thinking and acting on them *before* you enter any confined space.

Who Should Attend

Anyone who ever works in a confined space—or supervises someone who does.

What You Will Learn

This course identifies the various types of confined spaces as well as the various control measures to ensure a safe working environment.

Proper use of protective clothing and equipment and emergency rescue techniques. The various hazards are covered in detail, as are the steps needed to form a well organized control team. At the option of your company, we can also train and provide entry permit and their respective requirements.

Seminar Content

You'll learn how to:

- Enter confined spaces
- Work safely in confined spaces
- Technical and psychological factors in rescue situations
- Satisfy permit and preventive procedures
- Apply non-entry rescue plans and techniques
