

ControlLogix Refresher

You've got a ControlLogix course under your belt, but:
Are you getting a little rusty?

Here's a refresher for if you're out of practice.

This course is intended as a review for technical personnel who have already taken a formal ControlLogix training course but have had limited hands-on experience since.

Who Should Attend

Anyone with a formal ControlLogix systems course, but limited practice.

What You Will Learn

This seminar focuses on performing tasks unique to the ControlLogix platform: Adding and configuring I/O modules, using ControlFlash, creating tags and searching using RSLogix5000™. Participants who are fluent with PLC-5™ or SLC-500™ will benefit most from this seminar, as it focuses on how to perform tasks that are slightly different in RSLogix5000 than in RSLogix5/500™. Instruction set is not discussed unless the instructions are unique to ControlLogix (or work differently than in PLC-5).

Seminar Content

- Hardware Overview
- RSLogix5000
- Adding I/O Modules
- Creating and Monitoring Tags
- User Defined Data Types and Arrays
- Searching
- Forcing Digital and Analog I/O (Searching for forces)
- ControlFlash
- Accessing System Data: GSV and SSV
- Inter-processor Communications (Message and Produced Consumed tags)
- Facilitator Ltdc electrical faculty

Prerequisite

Previous course in PLC-5G™/SLC-500™.
